

Business Licenses

Tempest Business Licenses is fully integrated with the Tempest Land system, providing easy retrieval of businesses by civic address or by property owner. The Business Licenses application provides a full range of License processing features including renewal generation, fee re-calculation, payment entry and adjustment entry. It also provides complete workflow tracking for each license from the application phase through to approval, rejection, closure or paid status. Business Licenses acts as a subledger to the majority of industry leading General Ledger applications, allowing you to perform a transaction upload of all transactions or produce reports for input into your GL.

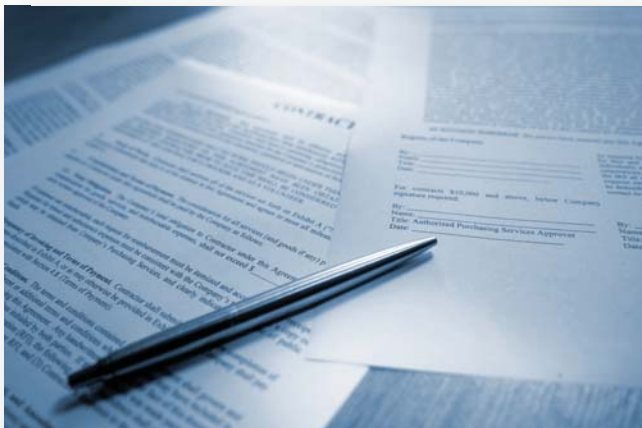

"The Tempest Business License application is an essential part of the Township of Langley's Business License Department. As the department's main database, this land linked application provides a large range of features that allows us to service the needs of the department and the customer. It is great that the system allows us to incorporate the primary needs of the Business License department which include the tracking of licenses, cash transactions, invoicing, and reporting capabilities for resident and non-resident applications. As a key user of the Tempest Business License system, I find it to be very user-friendly and the ability to integrate with the Tempest Land system is an important factor to me whereas time management is significant in maintaining an effective use of resources."

~ Bev Weller
Business License Inspector
Township of Langley

Benefits

- Workflow reduces time and effort, ensuring a smooth renewal process
- Reduce risk with workflow processing for your inspection process
- Reduce risk, integration to the Tempest Land system ensures that, based on zoning, business history and land use, you are not open to potential legal exposure
