

# Cash Collections

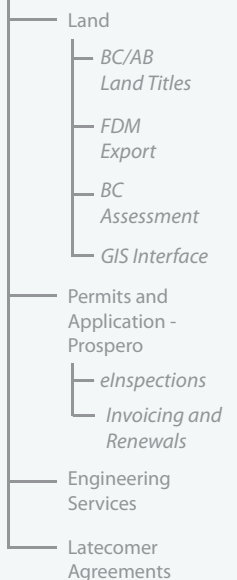

The Tempest Cash Collections system facilitates standardization of the cash receipting processes across your organization and applications. Cash Collections is integrated with the Tempest revenue collection products: Property Tax, Utility Billing, Dog and Business Licenses, Local Improvements, Municipal Ticketing and Permits and Applications - Prospero. In addition, it can also be tightly integrated with most industry leading receivable systems and supports payment of user configurable miscellaneous items. Cash Collections allows you to track payments, batches and approvals. It provides automatic updates to all of the Tempest revenue products and non-Tempest revenue products reflecting new balances. Payments are entered by scanning the bar codes or entering the subsystem and payment code, followed by payment amount and type, and finally validating cheques and payment stubs. Full security restricts access to payment entry, approval and batch void functions. The Tempest Cash system acts as a full Point of Sale system allowing for miscellaneous item payments. It can turn any PC into a point of sale station augmented with scanners, cash drawers and printers. In addition, it facilitates the full range of a day's activities beginning with day open batch creation and finishing with bank deposits.

## Revenue Systems Management

## Community Development

## Bylaws & Ticketing

## Benefits

- Save time and promote accuracy with complete online, real-time integration to Tempest and non-Tempest receivable systems
- Save time and provide better customer service by offering the ability to receive payments where dog licenses and/or ticket accounts do not yet exist
- Promote accuracy, all information required to process payments is available on screen using customized entry screens
- Cost savings on hardware, no custom PC or keyboard is required - any PC can be a cash workstation
- Improve customer service with the ability to suspend receipts
- Save time for both the cashier and customer with the ability to default payment amount by subsystem
- Security for cash management is further enhanced through an easy draw and deposit process allowing for multiple daily draws

# Features

- Offers complete online, real-time integration to Tempest and non-Tempest receivable systems
- Offers all information required to process payments on screen
- Supports any PC as a cash workstation without a custom PC or keyboard
- Point of sale and miscellaneous items are easy to process
- Draws and deposits make balancing and bank deposits easy
- Allows user to restrict payment methods by receivable type
- Allows user to identify any type of payment method
- Captures payer name at the time of payments
- Allows users to temporarily park a transaction
- Allows users to default payment amount by subsystem
- Allows for collection of HOG, deferral and installments directly at till
- Allows users to issue building permit directly at till and capture deposit information
- Messages entered from subsystems are available to the cashier at the till
- Supports foreign currency
- Offers miscellaneous Items/Point of Sale
- Allows users to define list of miscellaneous items organized by category
- Allows users to define custom station-by-station point of sale screens using miscellaneous items
- Allows users to set up custom item descriptions, receipt descriptions and scan codes
- Summarizes by receipt number, receipt description or cashier entered reference field prior to sending to GL
- Identifies unlimited tax rates as percentage or amount by each miscellaneous item

## Non Tempest Receivables Interface:

- Allows users to define external databases from which to look up and update customer balances (immediately on line)
- Allows users to look up and update to any database (SQLServer or Oracle) regardless of the database used for Tempest
- Allows users to define the scan codes for non-Tempest receivable applications
- Allows users to define the screen layout for non-Tempest applications. This can include customer information, balance information and any fields available in your own system
- Allows users to define the update and validation points for your external database
- All miscellaneous AR payments are approved through Tempest Cash Collections for a single point of access to your General Ledger

For more detailed specifications on how the Tempest Cash Collections module interfaces with Tempest applications, please see the following: Property Tax, Utility Billing, Local Improvements, Business licenses, Dog licenses, Permits and Applications - Prospero, and Municipal Ticketing.
