

# Permits and Applications Prospero

Prospero is Tempest's application for managing the permitting and application process across various departments within Local Government. It is designed to integrate with Tempest's Land system and related modules providing a seamless enterprise-wide solution addressing all requirements involved in the Community Development process. When integrated with other Tempest modules, including Land, Property Taxation, Utility Billing and Licensing, it leverages your investment in existing information by centralizing diverse and decentralized data sources and applications.

"It was very refreshing to work with Tempest on the implementation of their software and the subsequent training. A company that cares about their clients and what the client's needs are. Our ongoing relationship with the Support Desk can only be described as awesome. They are quick to respond and solve issues, always putting the client first. Our implementation of IntelliSearch for Prospero has saved us both time and money in managing our Prospero folders and locating information."

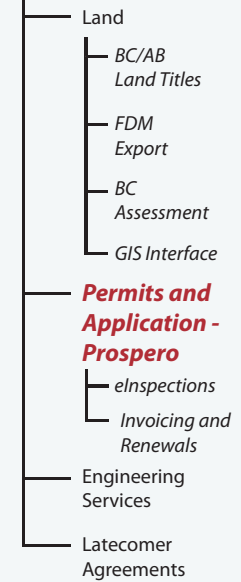

~ Ed Saffin  
Database Technician  
Regional District of East Kootenay

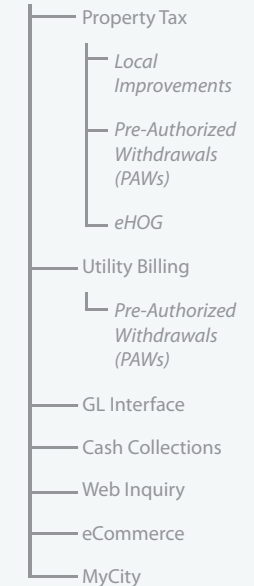

Major advantages of this approach include increased efficiency and the reduction of administrative costs involved in storage, maintenance and synchronization of duplicate records across various departments. Additional benefits of the Tempest solution include the ability to share property addresses, legal descriptions, names and other related information across all departments. Workflow management ensures effective tracking of the many steps involved in the application process. Scheduling of key activities, such as public hearings, issuance of permits, deposits and the ability to attach all related documents, regardless of format or type, reduces the risk of missing a step or misplacing an important document. At the same time, the system compiles a very detailed history of all aspects of a process for future reference and risk mitigation.

Other features of Prospero, when integrated with Tempest's Cash Collections, facilitate acceptance of payments against permits, applications and deposits. Tempest's GL Interface module provides the ability to export receivables and payments to most industry leading General Ledger applications. Optional real-time integration is also available with Mpowered's FieldPro to allow building inspectors to complete their tasks in the field in a more efficient and flexible manner. Both business and citizen service can be greatly enhanced by the addition of Tempest's MyCity, our Web portal module, facilitating online status enquiries for permits and applications.

## Community Development

## Revenue Systems Management

## Bylaws & Ticketing

# Features

- Supports a wide variety of file formats as attachments to a single record
- Tracks a wide variety of activities including permits and applications, deposits, development securities and development cost charges with integration to the Community Development system
- Tight integration with your Cash Collections, General Ledger, Business Licensing, Engineering Services and Geographic Information systems
- Offers fully user-definable permits and application types
- Allows multiple permit and application types to be attached to a single project
- Allows multiple properties to be associated with individual permits or applications
- Allows an unlimited number of user-definable people to be associated with a permit or application
- Reduces data entry through sharing of data with Tempest's Land and Owner Names database
- Unlimited Fee Types and Deposits
- Unlimited Special Conditions
- Unlimited number of setback categories
- Allows user-definable attributes
- Accepts Deposits and permit issuances via Cash Collections
- Supports Stats Canada building and work code tracking and automated file export
- Full General Ledger and subledger integration
- Integrated with Word Processing for automated letter/form generation
- Optional integration to Mpowered FieldPro for remote inspections using Blackberries
